PROTECT

everyone onboard
from illness

Prevent the spread of disease.

Even with social distancing measures, everyone onboard a public transit vehicle is at risk. Yet many people rely on public transit, making it critical to disinfect each vehicle properly. Protect operators and riders with a detailed sanitization protocol that includes a schedule, supplies, instructions and a checklist of high-touch areas.

Add sanitization protocols to your inspections.

Our patented electronic verified inspection reporting (EVIR[®]) system is ideal for ensuring proper protocols are followed and that each operator digitally verifies the vehicle was properly cleaned. EVIR also automatically complies with the inspection portion of the new PTASP regulations.

- Place a Zonar RFID or NFC tag on each inspection zone of the vehicle.
- Operators must physically visit each sanitization zone and scan the tag.
- Operators electronically sign the inspection and upload the results into our secure online portal.

Fleet managers can log in to the online portal to monitor completed, incomplete or missing sanitization checks. They can also view the timestamped zones to see if any part of the cleaning was rushed or performed improperly.

EVIR's cleaning protocol

1. Scan asset tag.
2. Scan zone tags.
 - Interior front
 - Interior rear
3. Clean and sanitize.
 - Remove debris
 - Vacuum or sweep
 - Clean windows
 - Remove graffiti
 - Clean seats
 - Check for damage to seats
 - Other detailed cleaning
