ZONAR LOGS™

Ensure compliance, then get on with business.

PREVENT	**ENSURE**	**IDENTIFY**	**MONITOR**
violations with preemptive alerts	compliance with the latest laws	trends and most common violations	driver compliance and safety

Protect your drivers.

Make sure your drivers operate safely and comply with the electronic logging device (ELD) mandate. While you're at it, make compliance easier by providing drivers with an intuitive driver app that displays real-time clocks and at-risk notifications when they're nearing a violation. Plus, make roadside inspections easier and faster with log certifications and built-in data transfers, further reducing the risk of accidental violations.

Zonar Logs is self-certified with the U.S. Federal Motor Carrier Safety Administration (FMCSA), and comes available on the secure Zonar Connect™ or Samsung Galaxy Tab Active2 in-cab driver tablets. Unlike mobile phone solutions, Zonar Logs will lock down when the vehicle is in motion to prevent in-cab distractions.

Simplify logging.

The easier a new technology is to use, the easier it makes being compliant. Drivers access Zonar Logs through their Zonar tablet to view their available hours, update their duty status, edit a previous status, and electronically certify and submit their Hours-of-Service (HoS) records. The logs will automatically update driving statuses based on vehicle data to help ensure accurate, up-to-date records.

Enable and empower drivers.

Using their email, drivers can log in to Zonar Driver Dashboard®, an online portal, from their computer, smartphone or other mobile device. There, they can easily update their duty status to ON or OFF and export their logs.

Comply with the right rulesets.

Rulesets vary from U.S. intrastate, interstate and passenger carrying fleets. And some exemptions apply to certain fleets. To help you comply with the rules that apply to your particular fleet, Zonar Logs supports the following (among others):

- Property-carrying 60/70-hour limit
- Passenger-carrying 60/70-hour limit
- Canadian HoS cycles
- Short haul drivers
- Construction operations

Protect your drivers and your fleet.
Monitor compliance online.

Keep an eye on your drivers' safety and compliance and get the data necessary to ensure both. Compliance Insights is an intuitive, efficient dashboard that makes data provided by Zonar Logs available within the Zonar Ground Traffic Control® web portal.

Easily review driver logs, suggest log edits and assign unassigned driving time to the correct driver. Plus, monitor key data such as live statuses, HoS violations, driver availability and vehicle malfunctions.

See each driver's live status.

Access the Live Status map view within Compliance Insights that shows each driver's real-time location and duty status. See who's at risk of being in violation—and who already is. See their current address, direction in which they're driving and the vehicle they're currently operating.

Spot trends and violations.
With one click, view the number of fleet violations, the percentage of drivers currently in violation and the most common violation for a specific time period. Breaking down each type of violation in this manner highlights current driving behaviors and trends, including rest breaks, daily drives, on duty and weekly on-duty violations.

View key data in table or chart view to quickly identify trends. And see view the percentage of drivers currently in violation so you can take immediate action to prevent them from being placed out-of-service.

See each driver's availability.
Know which drivers are available so you can better plan upcoming trips. In one comprehensive table, Zonar Logs gives you details for the available ON and DRIVE hours for each driver in your fleet. Also see their current location, duty period and hours to be gained from the rolling 7/8 days.

View asset malfunctions.
The ELD mandate requires that a vehicle's engine control unit (ECU) be monitored to capture velocity, RPMs, odometer and engine hours that exceed 5 seconds of the vehicle requesting them. Access the easy-to-use malfunction report to quickly identify which vehicles are sending malfunctions and which drivers are impacted.

If you need more insight into each malfunction or you're not sure which corrective action to take, the report comes with tips, including causes and resolutions. Our Customer Success team is also always available around the clock to help.

Work with a team of experts.
Effective compliance and safety programs are critical. We're here to help and so is our dedicated team of safety and compliance experts, who have decades of combined experience in transportation. If you have questions about current or proposed industry regulations, contact us for a complimentary consultation.

Features
- Meets Canadian regulations for Cycle 1 and Cycle 2
- Meets title 49 CFR 395 ELD and HoS supporting documents
- Self-certified with FMCSA
- FMCSA registered
- Alerts drivers of approaching violations
- Roadside View for easier inspections
- Unidentified drivers logs
- Live Status map view
- Count per violations
- Automatic software updates with new and updated laws
- 24/7/365, U.S.-based technical support from Zonar Customer Care
